Instructions.

The GMC mini dehumidifier has been designed specifically to remove excess moisture and bad odor from cupboards, wardrobes, cars, caravans and other confined spaces. It is perfect for spaces where a portable dehumidifier is not practical. The GMC mini dehumidifier features a status indicator for when it needs to be recharged and it can be used over and over again.

Operating Instructions.

1) Ensure that the unit is upright when it is being charged, plug in the unit to test the moisture level as indicated on the front of the unit.

When the granules in the indicator are blue, the dehumidifier is ready to be used.

When the granules inside the indicator turn orange, it means that the dehumidifier needs to be recharged.

2) Place the dehumidifier in the areas where you require the moisture to be removed.

3) Periodically check the unit every 2-3 weeks, when the water glass indicator turns blue as indicated on the front of the unit, the unit will have absorbed its maximum amount of water.

4) To dispel the moisture and recharge the unit, simply plug the unit if for 10-15hrs until the unit indicates the water glass is dry.

WARNING.

When recharging the dehumidifier please ensure the unit is upright this will ensure the product structure remains intact when charging the unit, especially in cases where the unit has been plugged in for an extended period of time. As per the image below.

**Voltage: 220V-240V 50Hz / 60Hz
Power: 12W**

SERVICE AND WARRANTY

GMC Air conditioning was established in 1995 and is one of South Africa's leading cooling and heating companies.
